Custom
Form Builder

Give your employees, customers and prospects beautiful, branded, custom forms instead of plain row-and-column web forms. Unlock your design potential and reflect your company's brand for professional results.

Any image or background can become a custom Quickbase form: from Word, PowerPoint, photo, web page, screenshot. Drag & drop Quickbase fields anywhere with free-form placement, field sizing, formatting. It is a Live Quickbase form in minutes for online use anywhere including auto generated QR codes for Mobile devices.

Or, design custom forms with our no-code build-from-canvas html editor. Forms can grow or shrink dynamically, to adjust to the content, providing even more flexibility.

Branded custom forms normally require writing lots of code, at $1,000/page. Changes are in code too. But the Form Engine provides drag-and-drop, no-code creation and updating of branded, custom Quickbase forms your business needs and your users will love.

Wide range of triggers, logic, workflow can be added making it the most advanced custom form builder available.

- **Create beautiful, branded forms that look amazing and would otherwise require programmers.**
- **Automate agreement workflow, with employees, customers, vendors with no additional licenses or user training required.**
- **Nearly limitless design flexibility.**
- **Built-in e-signatures eliminate the added cost of DocuSign and others.**
- **Every digitized form is mobile enabled with QR codes, geo-location, SMS/Text. Execute with e-signatures.**
- **Easily added to your Quickbase subscription.**

Form Engine Free Trial
